Involute and Helix Testers PFSU 1200 · PFSU 1600

Involute and

PFSU 1200 for gear diameters from 0 — 1200 mm (0 — 47.25"), PSFU 1600 for gear diameters (0) 160—1600 mm ((0) 6.3"—63") with infinitely variable base circle and helix angle setting (up to 90°) are characterised by universally acknowledged advantages:

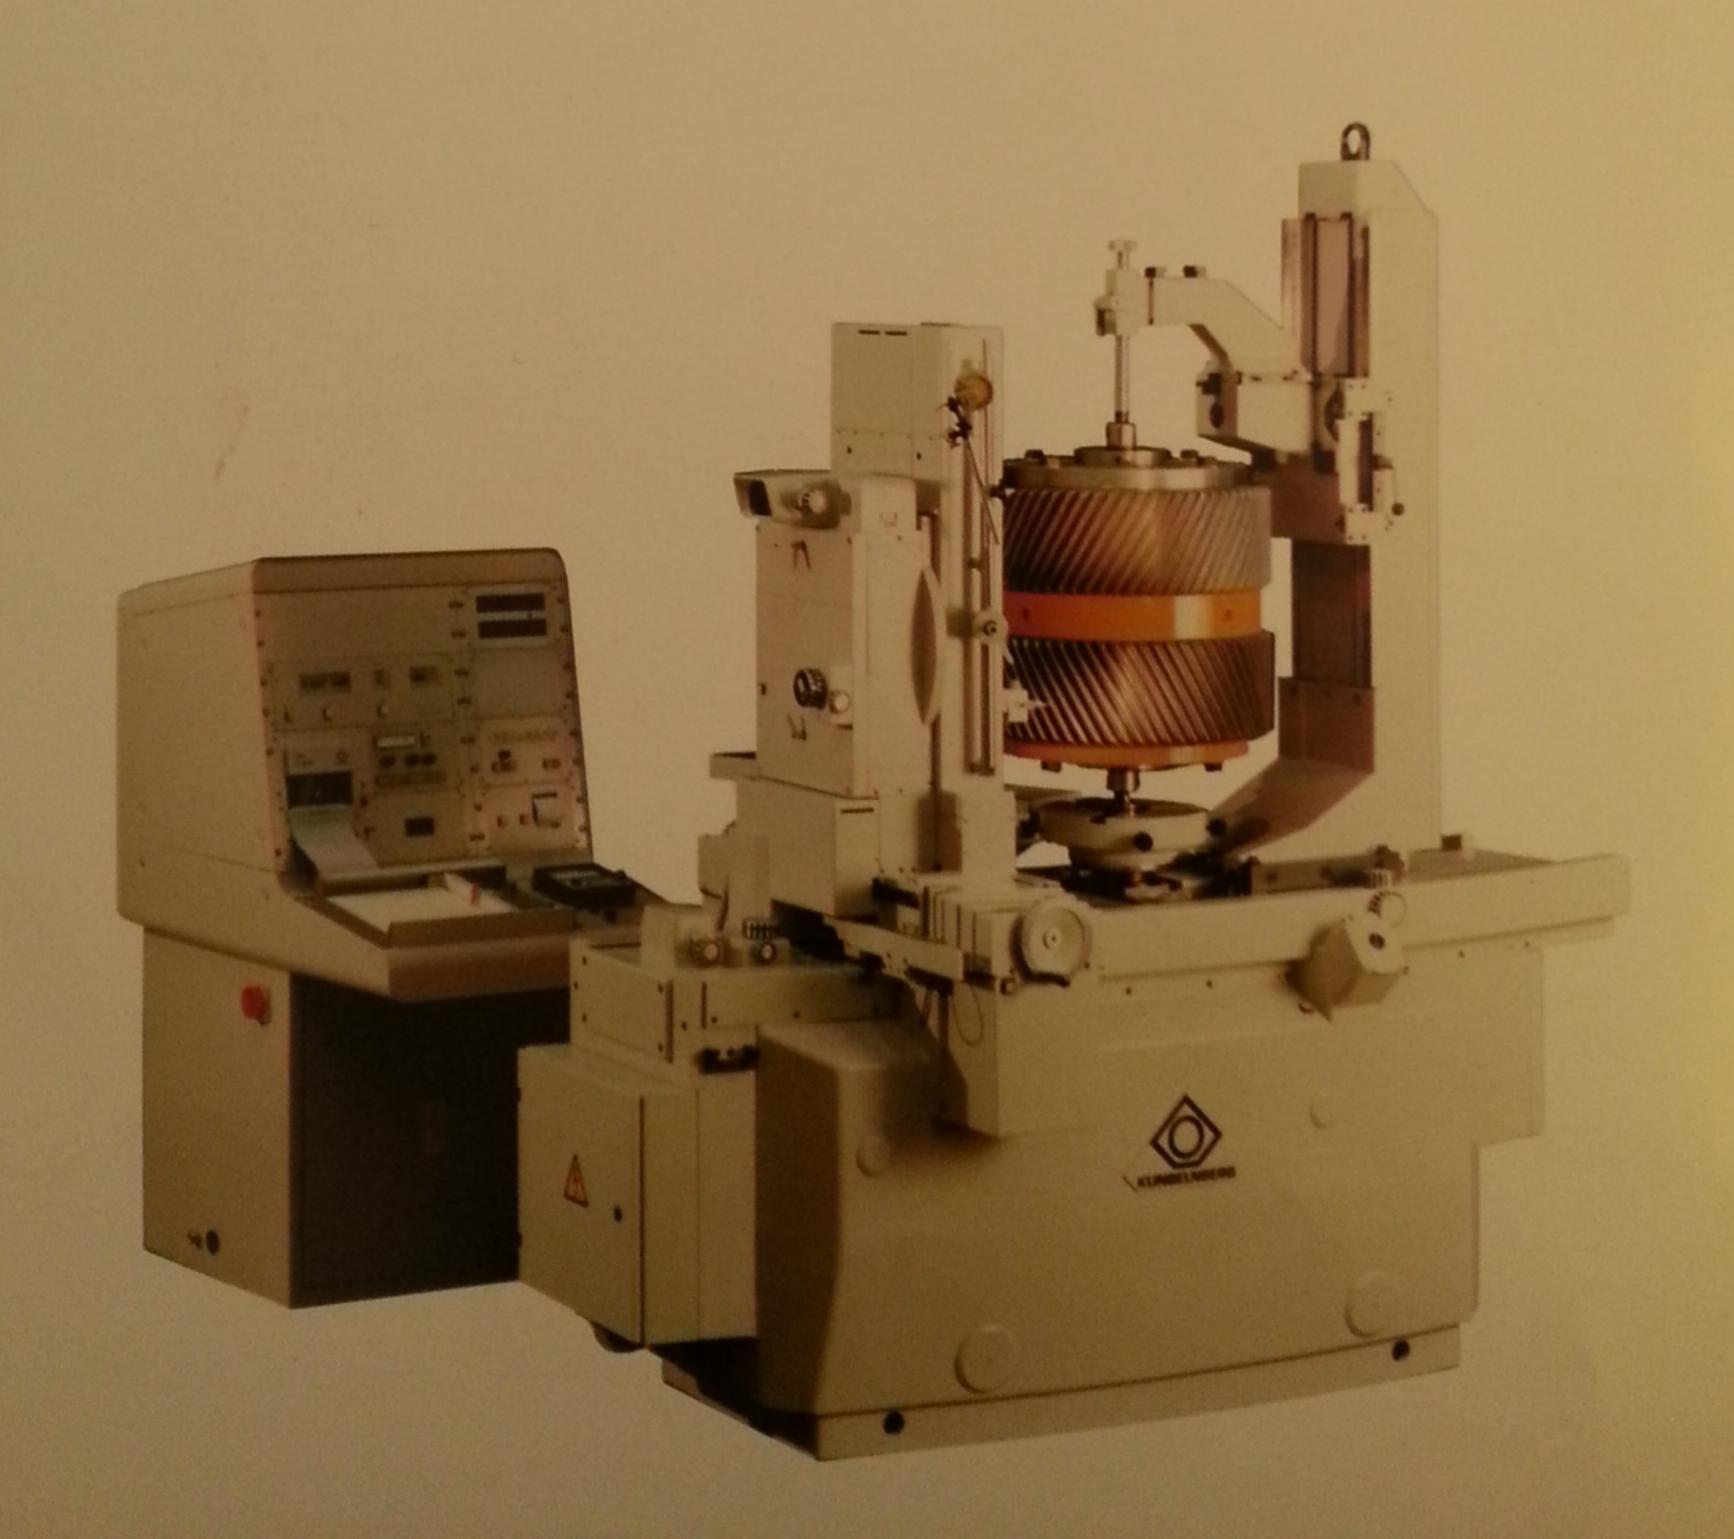

Time tested design.
Wide range of application.
Simple and practical operation.
High degree of measuring accuracy and measuring reliability. Versatile application.
Up to date measured data evaluation.

The range of application is not simply restricted to involute and lead tests on external and internal spur gears, it also extends in a unique manner to

measuring all individual tooth data

on straight and helical spur gears, as well as on shaping and shaving cutters, without the need for reclamping.

The following tooth data can be tested:

Helix Testers

Tooth flanks — respectively cutting edge forms. Involute, base circle diameter and

pressure angle.

Profile corrections and their locations.

Helix angles, leads and their uniformity.

Lines of contact (involute generating straight line).
Surface roughness on tooth flanks.

Concentricity of teeth.

Tooth to tooth pitch error,
individual and composite pitch.

Tooth thickness and tooth width
over several teeth.

It is also possible to:

Reconstruct unknown tooth data and to carry out measurements of a general nature, such as concentricity, roundness and surface roughness on a variety of workpieces; conicity of external and internal tapers; Planeness and angles on workpiece surfaces, etc.

The advantageous design of this universal tester makes the use of several single-purpose testers superfluous.

Technical Data

Range of Application	PFSU 1600		
	(0) 100 1000		
Min./max. workpiece diameter Min./max. workpiece diameter (infinitely variable)	(0) 160 - 1600 mm	(0) - 6.30"- 63"	
Min./max. base circle diameter (illimitery variable)	(0) 150 - 1500 mm	(0) - 5.9"- 59.05"
